North Wales businesses invited to Wheelabrator Parc Adfer supplier event on November 3

Wednesday, October 18 - Businesses from across North Wales are invited to attend a second Meet the Buyer event as Wheelabrator Technologies nears the start of construction for its Parc Adfer energy recovery facility in Deeside.

Construction of the new facility will take approximately three years and create hundreds of jobs, while offering multi-million pound supply chain opportunities for businesses. Once construction is completed and the facility becomes operational, annual maintenance and supply chain opportunities will continue over Wheelabrator Parc Adfer’s 25-year life span.

Wheelabrator has appointed CNIM Group as its EPC (Engineering Procurement Construction) contractor which in turn, has selected Clugston Construction to lead the civil engineering works. All three companies will be on hand at the Meet the Buyer event to speak to business representatives.

The construction phase will require a range of potential supply chain opportunities and these will be unveiled at a Meet the Buyer event to be held November 3 in the Main Hall at Deeside Sixth, Coleg Cambria located on Kelsterton Road from 07.30 to 18.30.

“The construction of the Parc Adfer energy recovery facility will require many services and we’re delighted to engage with businesses and suppliers in the broad range of opportunities available,” said Parc Adfer’s Senior Project Manager Apo Sarandidis. “We’re looking forward to learning more about the depth of talent and experience that businesses in the North Wales region and beyond can offer the Parc Adfer project.”

Managing up to 200,000 tonnes of non-recyclable waste from North Wales’ homes and businesses each year, Parc Adfer will divert waste from landfill and instead use it to generate clean, renewable energy, enough to power an estimated 30,000 homes.

The facility is being built through the North Wales Residual Waste Treatment Project, a partnership which was formed to find a more sustainable solution to managing waste from North Wales and consists of the Isle of Anglesey County Council, Conwy County Borough Council, Denbighshire County Council, Flintshire County Council and Gwynedd Council.
As a potential combined heat and power facility, Parc Adfer will also have the capacity to export heat energy to nearby industrial, commercial or residential users. Inert ash from the facility will be recycled and reused in construction, while metals will also be removed and recycled – the combination of these factors will increase recycling rates in North Wales by up to seven percent.

The Meet the Buyer event will take place on Thursday 3 November, 2016 in the Main Hall at Deeside Sixth, Coleg Cambria, Kelsterton Road, Connah’s Quay, CH5 4BR from 07.30 and 18.30. Businesses wanting to attend will need to register their interest by visiting www.parcadfer.com/suppliers before Friday 28 October.

- Wheelabrator Technologies is the second largest U.S. energy-from-waste business, and is an industry leader in the conversion of everyday residential and business waste into clean energy. Wheelabrator has a platform of 20 power-producing assets across the U.S. and U.K.—16 energy-from-waste facilities, four independent power plants as well as four ash monofills and three transfer stations. Wheelabrator has an annual waste processing capacity of over 7.5 million tons, and a total combined electric generating capacity of 853 megawatts—enough energy to power more than 805,000 homes. Wheelabrator also recovers metals for recycling into commercial products. The company’s vision To develop, deliver and realize the potential of clean energy speaks to Wheelabrator’s ongoing commitment to the development of clean energy solutions for its customers and local communities.
- Wheelabrator is owned by Energy Capital Partners, an energy-focused private equity firm. For more on Energy Capital Partners, please visit www.ecpartners.com. For more on Wheelabrator, please visit www.wtienergy.co.uk.
