Triton High School graduate Tim Cashman awarded Daniel Madigan Scholarship

BYFIELD, Mass. - June 3, 2011 - Triton Regional High School wrestling standout and future engineer Tim Cashman was named the 2011 recipient of the Daniel P. Madigan Memorial Scholarship.

Sponsored by Wheelabrator Technologies Inc., the scholarship is awarded annually to two students - one from Triton Regional and the other from Northbridge High School - who have been accepted into an engineering program at a degree-granting college or university. Each recipient receives $5,000.

This year marks the 15th annual presentation of the scholarship, which honors the former New England regional vice president of Wheelabrator, Daniel Patrick Madigan, who passed away in 1995. A pioneer in the waste-to-energy business, Madigan served as chief engineer and plant manager of Wheelabrator Saugus during the company’s early years.

Madigan’s son, Cornelius, presented Cashman with the scholarship during the senior awards ceremony.

“It’s great that the company does this,” said Cornelius Madigan. “Our family appreciates everything Wheelabrator does in memory of my father, and it’s wonderful we’re able to help some students pursue their goals.”

“I was surprised and so glad that I applied,” said Cashman. “Money was definitely a factor in my college plans, so this scholarship will help a lot.”

A Rowley native, Cashman is the oldest of seven children. At Triton, he played golf and was captain of the wrestling team, which captured the 2011 Div. 3 state title. He was also captain and MVP of the baseball team. He is attending Bunker Hill Community College, where he will play baseball and pursue a career in engineering.

Andrew Rabaioli was this year’s recipient from Northbridge High. He is attending Rensselaer Polytechnic Institute and majoring in nuclear engineering.

About Wheelabrator Technologies
A wholly owned subsidiary of Waste Management of Houston, Texas, Wheelabrator Technologies Inc. is a world leader in the safe and environmentally sound conversion of municipal solid waste and other renewable waste fuels into clean energy. Wheelabrator’s 17 waste-to-energy facilities provide safe waste disposal for towns and cities across the U.S. Wheelabrator also operates five independent power plants designed to generate electricity using an assortment of fuels, including waste wood, tires, waste coal, and natural gas. In addition to producing electricity, some of these facilities also produce steam sold to nearby government and commercial establishments. Wheelabrator’s 22 facilities have a combined electric generating capacity of 896 megawatts, enough energy to power more than 985,000 homes. To learn more, visit www.wheelabratortechnologies.com.
